

Series 3731

Electropneumatic Ex d Positioner Type 3731-3 with HART® communication

Application

Single-acting or double-acting Ex d positioner for attachment to pneumatic control valves. Self-calibrating, automatic adaptation to valve and actuator.

Reference variable	4 to 20 mA
Travels	3.6 to 200 mm
Opening angle	24 to 100°

The electropneumatic positioner is used to ensure a preselected assignment between the valve stem position (controlled variable x) and the control signal (reference variable w). In this process, the output signal from a control device is compared to the travel/opening angle of a control valve and an output signal pressure (output variable y) is issued.

Special features

- Easy attachment to common linear and rotary actuators over SAMSON direct attachment interface, NAMUR rib, or to control valves with rod-type yokes acc. to IEC 60534-6-1 or to rotary actuators according to VDI/VDE 3845
- Any desired mounting position of the positioner
- Simple one-knob, menu-driven operation also in hazardous areas
- LCD easy to read in any mounting position due to selectable reading direction
- Configurable with a PC over the SSP serial interface using the TROVIS-VIEW software
- Variable, automatic commissioning using four initialization modes
- Preset parameters, only values deviating from the standard settings must be adjusted
- Calibrated travel sensor without gears susceptible to wear
- The "Sub" initialization mode (substitution) allows the positioner to be started up in case of emergency whilst the plant is running without the valve moving through the whole travel range
- Permanent storage of all parameters in non-volatile EEPROM
- Two-wire system with small load of 450 Ω at 20 mA
- Adjustable output pressure limitation
- Adjustable tight-closing function
- Constant monitoring of zero point
- Temperature sensor and operating hours counter integrated
- Self diagnostics; messages according to NAMUR Recommendation NE 107 or optionally issued using an analog position transmitter
- Integrated EXPERTplus diagnostics (see T 8388 EN), suitable for valves for throttling and on/off service, with additional partial stroke test for valves in safety-related applications
- Certified according to IEC 61508/SIL

Fig. 1 · Type 3731-3 Electropneumatic Ex d Positioner with HART® communication

Versions

Electropneumatic positioner with LCD, operable on site, local communication over SSP interface, diagnostic functions

- **Type 3731-3 EXPERTplus** · Positioner, communication using HART® protocol, diagnostic functions

Additional options

- Binary contact, output acc. to NAMUR (EN 60947-5-6) or directly to PLC, configurable as a limit switch or fault alarm output
- Binary input
- Analog position transmitter with two-wire transmitter
- Forced venting function (solenoid valve function)

Principle of operation

The electropneumatic positioner is attached to pneumatic control valves. It is used to assign the valve stem position (controlled variable x) to the input signal (reference variable w). The input signal received from a control system is compared to the travel or rotational angle of the control valve, and a pneumatic signal pressure (output variable y) is produced.

The positioner consists of a travel sensor system (2) proportional to resistance, an analog i/p converter with a downstream booster and the electronics unit with microcontroller (5).

When a deviation occurs, the actuator is pressurized or vented. The signal pressure to the actuator can be limited by software to 1.4, 2.4 or 3.7 bar.

A constant air stream to the atmosphere is created by the flow regulator (9) with a fixed set point. The air stream is used to purge the inside of the housing as well as to optimize the air capacity booster. The i/p module (6) is supplied with a constant upstream pressure by the pressure regulator (8) to make it independent of the supply air pressure.

Operation also in hazardous areas

The rotary pushbutton and display are accessible without having to open the positioner housing. As result, the positioner is still fully operable under hazardous area conditions.

The positioner is operated with a user-friendly rotary pushbutton. The parameters are selected by turning the knob, pushing it activates the required setting. In the menu, all parameters are listed in one level, meaning there is no need to search in submenus. All parameters can be checked and changed on site.

All values are displayed on the LCD. The reading direction of the LCD can be rotated by 180° at the push of a button.

The SAMSON configuration software, TROVIS-VIEW, can be used to configure the positioner. For this purpose, the positioner is equipped with an additional digital interface to be connected to the RS-232 interface of a PC.

All the parameters can be accessed over HART® communication.

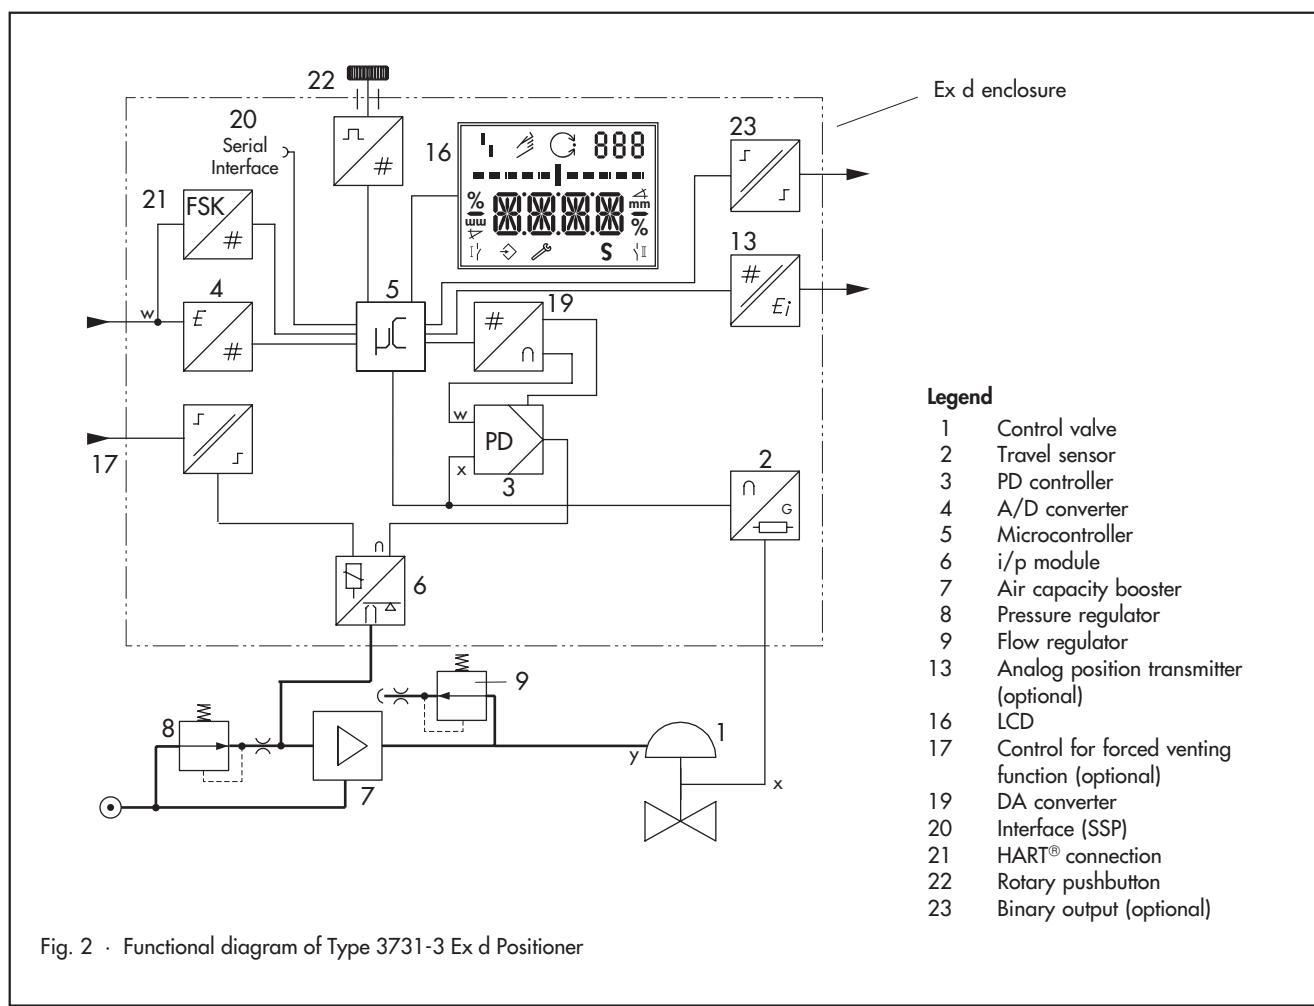

Table 1 · Technical data

Type 3731-3 Positioner		
Rated travel, adjustable	Direct attachment to Type 3277: Attachment according to IEC 60534-6-1: Attachment to rotary actuators:	3.6 to 30 mm 3.6 to 200 mm 24 to 100° opening angle
Travel range adjustable	Within the initialized travel/angle of rotation; restricted to 1/5 at the maximum	
Reference variable w	Signal range Static destruct. limit	4 to 20 mA · Two-wire device, polarity insensitive · Minimum span 4 mA 40 V · Internal current limit 60 mA
Minimum current		3.6 mA for LCD · 3.8 mA for operation Load impedance ≤ 9 V corresponding to 450 Ω at 20 mA
Communication		
Local communication	SAMSON SSP interface and serial interface adapter	
Software requirements (SSP)	TROVIS-VIEW with database module 3731-3	
HART® communication	HART® Field Communication protocol Impedance in HART® frequency range: Receiving approx. 455 Ω, sending approx. 185 Ω	
Software requirements (HART®)	For handheld terminal For PC	Device Description for Type 3731-3 DTM file certified according to specification 1.2, suitable for integrating the device into frame applications that support the use of FDT/DTM (e.g. PACTware); Integration into AMS™ Suite possible
Supply air	Supply pressure	1.4 to 6 bar (20 to 90 psi)
	Air quality acc. to ISO 8573-1 (2001)	Max. particle size and density: Class 4 · Oil content: Class 3 Pressure dew point: Class 3 or at least 10 K below the lowest expected ambient temperature
Signal pressure (output)		0 bar up to capacity of supply pressure · Can be limited by software to 1.4 bar/2.4 bar/3.7 bar ± 0.2 bar
Characteristics		Linear/equal percentage/reverse equal percentage Butterfly valve, rotary plug valve or segmented ball valve: Linear/equal percentage User-defined: Set in the operating software
	Deviation	≤ 1 %
Hysteresis		≤ 0.3 %
Sensitivity		≤ 0.1 %
Transit time	Supply air and exhaust air adjustable separately over software by up to 240 sec.	
Direction of action	Reversible	
Air consumption, steady-state	Independent of supply air 110 l _n /h	
Air output capacity	Actuator pressurized Actuator vented	At Δp = 6 bar: 8.5 m _n ³ /h · At Δp = 1.4 bar: 3.0 m _n ³ /h · Kv _{max} (20 °C) = 0.09 At Δp = 6 bar: 14.0 m _n ³ /h · At Δp = 1.4 bar: 4.5 m _n ³ /h · Kv _{max} (20 °C) = 0.15
Permissible ambient temperature	-40 to +80 °C The limits specified in the EC Type Examination Certificate additionally apply.	
Influences	Temperature Supply air Vibrations	≤ 0.2 %/10 K None ≤ 0.25 % up to 2000 Hz and 4 g acc. to IEC 770
Electromagnetic compatibility	Complies with EN 61000-6-2, EN 61000-6-3 and NAMUR Recommendation NE 21 requirements	
Electrical connections	Two threaded connections 1/2 NPT or optionally M20 x 1.5, screw terminals for 2.5 mm ² wire cross-section	
Degree of protection	IP 66 / NEMA 4X	
Explosion protection		
	ATEX: Ex II 2 G EEx d IIC T6, T5 or T4/ EEx de IIC T6, T5 or T4 / II 2 D IP 65 T 80 °C FM/CSA: XP/I/1/BCD/T4...T6; XP/I/1/IIB + H ₂ /T4...T6; Type 4X/IP 66	
Materials		
Enclosure	Die-cast aluminum EN AC-AlSi10Mg (Fe) (EN AC-43400) acc. to DIN 1706 Chromated and powder paint coated	
External parts	Stainless steel 1.4301/1.4305/1.4310	
Weight	Approx. 2.5 kg	

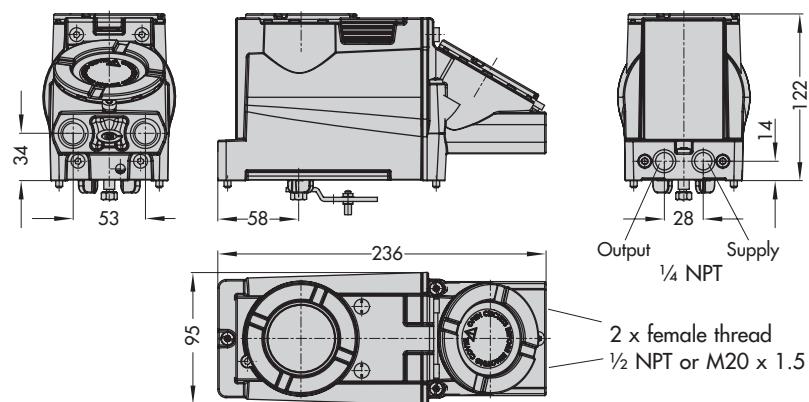

Optional binary output	Software limit switch or fault alarm output galvanically isolated, optionally NAMUR EN 60947-5-6 or PLC	
Switching state	Terminals B-C Switching output AC/DC (PLC)	Terminals A-B
	Conducting / residual voltage < 1.7 V	Non-conducting / ≥ 2.1 mA
	Non-conducting / high resistance, $I < 100 \mu\text{A}$	Conducting / ≤ 1.2 mA
Operating voltage	Switching capacity: 40 V DC / 28 V AC / 0.3 A Static destruction limit: 45 V DC / 32 V AC / 0.4 A	Only for connection to NAMUR switching amplifiers acc. to EN 60947-5-6
Optional binary input	Galvanically isolated · Switching behavior configurable	
Active switching behavior		
Connection	For external switch (floating contact)	
Electrical data	Open-circuit voltage when contact is open: max. 10 V Pulsed DC current reaching peak value of 100 mA	
Contact	Closed Open	"On" switching state "Off" switching state
Passive switching behavior		
Connection	For externally applied DC voltage, reverse polarity protection	
Electrical data	0 to 24 V, destruction limit 40 V, input resistance 6.5 kΩ	
Voltage	> 6 V < 4 V	"On" switching state "Off" switching state
Optional forced venting	Galvanically isolated	
Input	0 to 40 V DC / 0 to 28 V AC, static destruction limit 45 V DC / 32 V AC, input resistance ≥ 7 kΩ	
Signal	Fail-safe position with input voltage ≤ 3 V	Normal operation with input voltage > 5.5 V
Optional analog position transmitter	Two-wire transmitter	
Auxiliary power	11 to 35 V DC, reverse polarity protection, static destruction limit 45 V DC	
Output signal	4 to 20 mA	
Direction of action	Reversible	
Working range	-1.25 to 103 % of the travel range, corresponding to 3.8 to 20.5 mA optionally also for fault alarm indication over 2.4 or 21.6 mA acc. to NAMUR Recommendation NE 43	
Characteristic	Linear	
Hysteresis and HF influence	Same as the positioner	
Other influencing variables	Same as the positioner

Positioner attachment

The Type 3731-3 Positioner can be attached directly to the Type 3277 Actuator, to control valves with cast yokes or rod-type yokes according to IEC 60534-6 (NAMUR) or to rotary actuators according to VDI/VDE 3845.

The mounting parts and accessories necessary are listed in the Mounting and Operating Instructions EB 8387-3 EN.

Direct attachment

The positioner can be attached directly to the Type 3277 Actuator with a connection block. In actuators with fail-safe action "Actuator stem extends" and Type 3277-5 Actuator (120 cm²), the signal pressure is transmitted over an internal bore in the actuator yoke to the actuator. In actuators with fail-safe action "Actuator stem retracts" and in actuators with effective diaphragm areas of 240 cm² or larger, the signal pressure is transmitted to the actuator over a ready-made external pipe connection.

Attachment according to IEC 60534-6 and NAMUR

Using the appropriate bracket, the positioner can also be attached to the yoke of control valves according to IEC 60534-6 (NAMUR recommendation). The positioner can be mounted on any side of the control valve.

Attachment to rotary actuators

The positioner is fitted with an adapter housing and spacers to attach it to rotary actuators according to VDI/VDE 3845.

Another common mounting kit suitable for SAMSON Type 3278 Rotary Actuator and VETEC Types S160 and R Actuators is available.
